Memo

Backed by [Bessemer Venture Partners](#) ([Shopify](#), [Pinterest](#)), [Overjoy](#) is an AI-powered wholesale operating system that helps consumer brands proactively find, sell to, and manage retail partners.

In the past year, the company has **quickly scaled ARR 570%** to an **est. \$1.25M live ARR** → **proj. \$4M ARR EO26** with **500+ customer brands**, and built a repeatable, profitable sales motion with a **6:1 LTV/CAC ratio**.

In Q4, [Bessemer Venture Partners](#) ([Shopify](#), [Pinterest](#)) pre-empted them with \$2M lead check. Since Q4, the company has grown ARR from \$850k → now \$1.25M ARR, and the CEO has allowed us to put in a bit more capital on the same terms as Bessemer, which is a **reasonable \$25M valuation**.

We are limited to \$150k in allocation total.*

Here's why we are excited to continue backing Overjoy...

lockdown era, but the subsequent iOS 14 privacy changes and rising digital advertising costs have driven customer acquisition costs up by 3x or more. According to the company, wholesale has emerged as a critical growth channel because offline retail touchpoints also drive online sales, effectively turning wholesale into marketing that brands get paid for. Yet the existing wholesale landscape is broken. Marketplace platforms like Faire offer little visibility into why sales happen, while traditional B2B tools like NuORDER and JOOR lack discovery and top-of-funnel capabilities. The wholesale enablement software market for US-based D2C brands represents a \$5.2B opportunity, according to the company's estimates.

The Solution: Overjoy is an AI-powered wholesale operating system that helps consumer brands proactively find, sell to, and manage retail partners, replacing passive marketplace reliance with a data-driven growth engine for offline commerce. The platform enables brands to analyze online and offline sales performance, discover retailers using sales and demographic data, target compatible retail partners, and sell through AI-powered outreach and CRM. According to the founders, the product has evolved from an occasional growth tool into a system of record that customers use throughout their workday. The company recently acquired Fiber, its Shopify and Faire integration partner, bringing third-party integrations in-house and giving the team full control over data reliability and integration velocity.

5.7x YoY Growth: The company has grown revenue **5.7x** in the past year, scaling from est. \$174K ARR in January 2025 to **est. \$1.25M live ARR**, according to the founders. Overjoy projects reaching **proj. \$4M ARR by EO26**. The platform now serves **500+ paying customers**, up from 123 a year ago, representing 346% customer growth. According to the company, the sales team has scaled from 0 to 9 full-time reps while maintaining a **6:1 LTV/CAC ratio**. The outbound channel shows strong unit economics: a 9.6% average response rate, 51.9% positive reply ratio, 82% onboarding-to-trial conversion, and 81% trial-to-close rate. Notable customers include Public Goods (\$40M+ annual sales), Blinc (\$10M+ annual sales), Burlap & Barrel, Vitruvi, Driftaway Coffee, Tipsy Elves, P.F. Candle Co., and David Protein, among others. Notably, six of their customers have invested in the company after using the product.

Strong Founding Team: Overjoy is led by two technical co-founders who met through the Floodgate Reactor '22 program. Alex Han (CEO) graduated from UT Austin with Honors in Computer Science and previously worked on **enterprise analytics** at Nutanix and **B2B commerce** at Broadleaf Commerce. Jun Kwak (CTO) graduated from Yale with a degree in CS and previously worked on data visualization and map analytics at Google Cloud AI, Robinhood, and Virtual Peaker. The team has scaled to 13 FTEs while maintaining strong execution.

Reasonable \$25M Valuation + Notable Co-investors: In Q4, Bessemer Venture Partners (Shopify, Pinterest) pre-empted them with \$2M lead check. Since Q4, the company has grown ARR from \$850k → now \$1.25M ARR, and the CEO has allowed us to put in a bit more capital on the same terms as Bessemer, which is a **reasonable \$25M valuation**.

Invest in the MV RF for reduced syndicate carry & no cutbacks on oversubscribed syndicates.

DEAL

This is a small \$500k extension available to existing investors on a SAFE with a \$25M post-money valuation cap. Funds from this round will be used to:

- Scale to **proj \$4m ARR EO26**
- Hire 1x GTM Executive, 2x AEs, 2x AMs, 1x Sales Support Engineer, 1x Senior Backend Engineer, and 1x Integrations Engineer
- Expand outbound channels with new experiments based on deep ICP understanding
- Test upmarket, higher-ACV accounts to evaluate expansion potential
- Launch next-gen lead generation product that productizes the internal GTM stack

This deal will likely qualify for QSBS exemption.

MARKET OVERVIEW AND PROBLEM

The D2C market experienced explosive growth during the pandemic, with D2C merchants tripling between 2020 and 2022. However, the iOS 14 privacy update and subsequent privacy legislation broke digital advertising models, driving customer acquisition costs up by approximately 3x, according to industry data. As a result, many D2C brands have been forced to diversify their distribution strategies and look beyond online-only channels. Wholesale has emerged as a compelling alternative: offline retail touchpoints not only generate revenue directly but also drive online sales, effectively making wholesale a form of marketing that brands get paid for, as the company describes it. Despite the growing interest in wholesale, the existing tools available to brands are inadequate. Marketplace platforms like [Faire](#), [Bulletin](#), [Mable](#), and [Abound](#) provide little to no insight into why sales happen and no way to proactively increase them. Meanwhile, B2B tools like [NuORDER](#), [JOOR](#), and [Shopify Plus](#) handle order management but lack discovery and top-of-funnel capabilities, leaving brands on their own to find retail partners. The wholesale enablement software market for US-based D2C brands represents a \$5.2B opportunity, according to Overjoy's estimates, and the company believes it is well-positioned to capture a meaningful share by filling the gap between passive marketplaces and feature-limited B2B tools.

\$5.2 Billion

Wholesale enablement software market for US-based D2C brands
(monthly SaaS subscription + 3% commission)

COMPANY OVERVIEW

Overjoy is an AI-powered wholesale operating system that helps consumer brands proactively find, sell to, and manage retail partners, replacing passive marketplace reliance with a data-driven growth engine for offline commerce. Founded in 2022, the company originally operated under the name Oversee before rebranding to Overjoy. The platform is purpose-built for consumer brands doing \$5M+ in annual sales that want to take a proactive, data-driven approach to growing their wholesale business. Over 500 brands across food and beverage, beauty, home, lifestyle, and specialty verticals currently use Overjoy, according to the company.

The core product sits at the intersection of lead generation, AI-powered outreach, and wholesale CRM, areas that have historically required brands to stitch together multiple disconnected tools or rely on passive marketplace platforms. According to the founders, Overjoy has evolved into a full system of record that customers use daily. The platform integrates with Shopify and Faire, and after acquiring Fiber (its third-party integration and ETL partner) in 2025, the company brought its entire data pipeline in-house, giving the team full control over data reliability and integration velocity. Since the acquisition, the team has launched native QuickBooks integrations and built a repeatable playbook for scaling future integrations, turning what was previously a bottleneck into a core product capability, according to the founders.

In 2025, the company introduced AI agents that the founders claim have dramatically changed how customers interact with the product, automating much of the manual overhead from core sales workflows like outbound prospecting and follow-ups. The team also invested heavily in product stability, fixing silent failures and scaling integration infrastructure, which the founders say reduced onboarding friction and drove meaningful organic growth from referrals and partnerships. The company's long-term vision extends beyond wholesale into becoming the operating system for all offline commerce, including pop-ups and flagship retail, positioning Overjoy to capture a broader share of the \$5.2B wholesale enablement software market for US-based D2C brands, according to the company's estimates.

Overjoy's platform is structured around a four-part growth flywheel: Analyze, Discover, Target, and Sell. The **Analyze** module gives brands visibility into both online and offline sales performance through heat maps and retailer location tracking. The **Discover** module enables brands to find new retail partners using sales and demographic data, with search filters for city, store type, income, and age demographics. Verified contact information for buyers is surfaced directly in the platform. The **Target** and **Sell** modules power outreach and deal management. Overjoy's AI assistant, Joy, is trained on millions of sales emails and data from hundreds of wholesale experts to help brands craft personalized outreach, automate follow-up sequences, and coach users on email strategy.

The built-in CRM manages the full pipeline from lead to closed account, with sample tracking, line sheet linking, order management, and Shopify/Faire integrations. The platform includes predictive reorder and upsell capabilities that help brands maximize lifetime value from existing accounts. In 2025, AI agents were launched to automate sales workflows and reduce manual overhead. The team invested in product stability, reducing silent failures and onboarding friction, which in turn drove meaningful growth from referrals and partnerships. The company also acquired Fiber, its Shopify and Faire integration partner, bringing the ETL pipeline in-house and enabling faster integration development. Since the acquisition, the team has launched native QuickBooks integrations and built a repeatable playbook for future integrations.

TRACTION & BUSINESS PERFORMANCE

- **5.7x revenue growth** in 2025: **est. \$174K ARR** (Jan 2025) → **est. \$1.25M live ARR** → **proj. \$4M ARR EO26**
- Customer base grew from 123 to 549 (+346% YoY)
- Average customer ACV of \$148/mo (\$1,776/yr)
- Outbound channel metrics: 434,801 qualified domain list size with 9%+ reply rate, 82.3% domain-to-verified contact find rate, 9.6% average response rate, 51.9% positive reply ratio, 41.1% positive-response-to-demo-booked rate
- Expected new ARR closed per AE per year: **\$1.84M**. Fully ramped sales unit (2 AE + 1 OM + 1 SDR): **\$3.6M new ARR/year**
- Expected maximum top-of-funnel capacity with current channel: 9.5 AEs producing **\$17.48M new ARR/year**
- Notable customers include **Public Goods (\$40M+ annual sales, Series B)**, **Blinc (\$10M annual sales)**, **Anuschka (\$8M annual sales)**, **Little Hometown (\$6M annual sales)**, with an average customer annual sales of **\$5.1M**
- Overjoy **proj. \$4M ARR by EO26**

BUSINESS MODEL

Overjoy generates revenue through a monthly SaaS subscription model. According to third-party sources, current pricing starts at \$125/mo for the Lite plan, \$210/mo for the Pro plan, and \$600+/mo for Enterprise plans. Overjoy also captures a 3% commission on top of the SaaS subscription. The product's rapid time-to-value and demonstrable ROI make it a low-friction sale for brands looking to grow wholesale without adding headcount. According to the company, the **current ACV is \$148/mo (\$1,776/yr)**, with a **6:1 LTV/CAC**. The company plans to grow through continued outbound scaling, upmarket expansion into higher-ACV accounts, product-led growth, and referrals (which accounted for 40% of top-of-funnel in a recent analysis), and new outbound channel experiments. The company's next-gen launch aims to productize its internal GTM stack, connecting lead generation and CRM into one system, unlocking upmarket expansion, and creating a foundation for adjacent market opportunities.

**We enable brands to
create a
growth flywheel.**

COMPETITIVE LANDSCAPE

[Juniper](#) provide a passive sales channel where brands wait for retailers to find them, with no transparency into why sales happen and no ability to proactively drive growth. According to the company, Faire in particular cannot offer mutual discoverability because doing so would endanger its marketplace model, creating a structural counterposition. Meanwhile, B2B commerce tools like [NuORDER](#), [JOOR](#), and [Shopify Plus](#) handle order management and catalog presentation but have no discovery or top-of-funnel capabilities. Brands using these tools are left to find retail partners on their own.

Overjoy is differentiated by being the first platform to combine proactive discovery (using location analytics, sales data, and demographic data), AI-powered outreach, and a full CRM into a single wholesale operating system. The company is platform-agnostic and designed for brands doing \$5M+ in annual sales, whereas Faire is designed for smaller makers. We believe this combination of discovery, CRM, and AI-powered sales automation positions Overjoy uniquely in a fragmented market.

Why can't Faire do this?

Counterposition.

- Must **own** brand-retailer relationships
- Designed for **small makers**
- Mutual discoverability would **endanger** their business
- **Platform agnostic** wholesale
- Designed for **\$5M+ sales brands**
- Built-in **mutual discovery** based on location analytics

TEAM

Alex Han | CEO

UT '22 (Honors Computer Science) | Floodgate Reactor '22
Enterprise analytics @ Nutanix, B2B commerce console @ Broadleaf Commerce.

Jun Kwak | CTO

Yale '22 (Computer Science, Psychology) | Floodgate Reactor '22
Data visualization, map analytics @ Google Cloud AI, Robinhood, Virtual Peaker.

Alex Han (Co-Founder & CEO)

Alex graduated from [UT Austin](#) with Honors in CS and was part of the Floodgate Reactor '22 program. Before founding Overjoy, he worked on enterprise analytics at [Nutanix](#) and built the B2B commerce console at [Broadleaf Commerce](#). Alex leads product, go-to-market strategy, and company vision. He has built a repeatable sales motion that scaled the team from founder-led sales to 9 full-time reps in under a year while maintaining strong unit economics.

Jun Kwak (Co-Founder & CTO)

Jun graduated from [Yale](#) with a degree in CS and Psychology and was also part of the Floodgate Reactor '22 program. He previously worked on data visualization and map analytics at [Google Cloud AI](#), [Robinhood](#), and Virtual Peaker. Jun leads engineering, product development, and technical architecture. Under his leadership, the engineering team has shipped AI agents, automated sales workflows, and the Fiber acquisition integration, transforming the platform from an occasional tool into a daily-use system of record.
